AI decision monitoring for regulated industries

Massive Market | Perfect Timing | Unfair Advantage | +16 More

An AI agent processing insurance claims can review 200 cases per hour. A human reviewer handles twelve. When the human makes a bad call, it affects one case. When the agent gets a rule wrong, 200 cases go out the door before the next audit cycle catches it. The faster AI agents get, the more expensive a single miscalibration becomes. Monitoring tools built for human-speed workflows have no answer for this.

Nullify AI sits between an AI agent and the real world. Every decision gets intercepted, evaluated against behavioral rules, and either approved or blocked before it executes. A loan approval agent that starts accepting applications outside its risk parameters gets caught before the first bad loan funds. A claims processing agent that misclassifies injury severity gets flagged before the payout goes out. As more deployments feed real decision data back into the system, the behavioral baselines sharpen. The patterns

that surface from live environments are the product's moat.

Start in one vertical where a bad agent decision has a dollar figure attached: fintech, healthcare, or insurance. Build an API layer that plugs into the agent frameworks enterprises run today: OpenAI, Anthropic, AWS Bedrock, Azure. Intercept decisions, run them through behavioral logic, and return a verdict in milliseconds. Onboard three enterprise customers manually and work their edge cases by hand. The first deploys are consulting engagements disguised as software sales. That hands-on work builds the behavioral library no competitor can replicate without matching the access.

Pricing starts at $50K per year for smaller deployments and scales to $500K based on agent volume and risk exposure. The EU AI Act mandates real-time monitoring for high-risk AI systems by August 2026. US regulations are drafting similar requirements. Companies that build compliance infrastructure before the mandate have it running when competitors are scrambling to stand one up. One compliance failure in a regulated industry costs more than a decade of the subscription.
